IT Undergraduate | MERN Stack Developer experienced in designing and delivering full-stack web applications, real-time communication systems, AI-powered tools, and location-based platforms. Skilled in React, Node.js, MongoDB, API architecture, and algorithmic problem solving.

Experience :

Full-stack Intern | Future Interns [Dec 2025 – Feb 2026]

- Collaborated with cross-functional teams comprising frontend engineers, UI/UX designers, and AI-tool specialists to define system architecture, API specifications, and development milestones across multiple web-based projects.
- Maintained backend services using **Node.js and Express.js**, integrating relational and NoSQL databases (**MongoDB, Firebase, MySQL, PostgreSQL**) to support dynamic content delivery, e-commerce workflows, and CMS-driven applications.
- Ensured scalable, secure, and SEO-ready solutions through efficient data handling and seamless frontend–backend integration.

Web Intern | Zidio-development [May 2025 – July 2025]

- Led a small team to build an Excel Analysis Platform with end-to-end parsing, visualization, and user management features.
- Improved data extraction speed through optimized Node.js parsing logic, resulting in noticeably faster processing.
- Developed React-based dashboards for clear insight presentation and better usability.

ACADEMIC PROJECTS :

Nagar Sahayta Portal App – Smart Civic Reporting System | **Native App, MERN Stack, REST APIs, Maps** GitHub

- Designed a native app for real-time civic issue reporting, integrated with a government web portal for priority-based scheduling and map-driven case analysis.
- Integrated interactive map visualization to display issues geographically, improving decision-making and their efficiency.
- Implemented structured issue categorization and priority logic, enabling faster case resolution and transparent civic governance.

Resume-Analyzer - AI-Based Resume Processing Platform| **MERN, NLP, pdf-parse, MongoDB** GitHub

- Automated resume extraction (skills, education, experience) with NLP pipelines/pdf-parse.
- Built a React-based dashboard enabling structured visualization and quick insights for recruiters.
- Worked on optimizing Node.js parsing and MongoDB indexing.
- Implemented **secure PDF/DOCX uploads** with validation and error-free data handling.

IP Address Tracker – Real-Time Geolocation Dashboard| **JavaScript, Leaflet.js, IP Geolocation API, HTML/CSS** Tracker

- Built a live IP tracking dashboard displaying location, timezone & ISP info with 100% real-time updates.
- Integrated Leaflet.js for interactive maps, improving data visibility and UX.

TECHNICAL-SKILLS:

Languages: C++, Python, TypeScript, JavaScript, SQL

Frameworks & Libraries: React.js, Node.js, Express.js

Databases: MongoDB, PostgreSQL

Developer Tools: Git, Docker, Kubernetes, Azure, VS Code, Postman, Socket.io, blender

Core: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Database Systems (DBMS), System Design

CODING-PROFILE : LeetCode | GFG | HackerRank | Unstop

CERTIFICATIONS :

- AWS Academy Cloud Foundations – 2025
- MERN Stack Developer – ABS Academy 2025
- Smart India Hackathon Participant – 2024,2025
